

Mercedes-Benz Energy Storage Home.

Use your solar power even if the sun isn't shining

We're taking the revolution from the road and bringing it to your home.

The road is clear for you to use your energy efficiently. Our focus on private energy supply systems is fuelled by the same passion we invest in constantly reinventing the automobile. Mercedes-Benz Home energy storage keeps the sun shining day and night. Surplus solar power produced by your own photovoltaic installation is stored for when the weather changes – even if the sun isn't shining. In short, you will have energy on hand whenever you need it. And the solution is presented in a stylish box that is bursting with energy.

Road-tested technology for use at home.

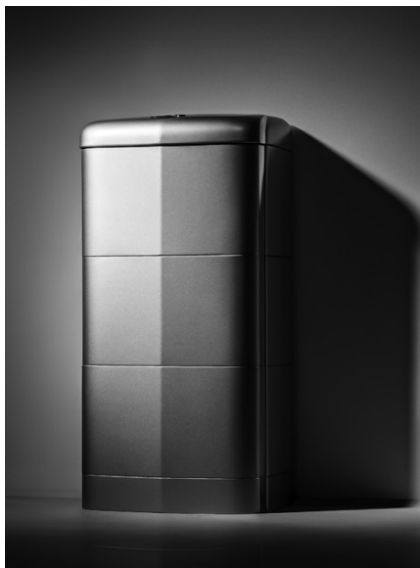

Energy is a precious asset – we all benefit from its sensible and resource-efficient use. For years, we have been striving to perfect sustainable electromobility technology – and now we can transfer it to private homes. Compact stationary energy storage systems allow you to align the consumption of your solar power more closely and effectively to your lifestyle, giving you a good degree of autonomy – for example when electricity prices change. A Mercedes-Benz Home energy storage system stores surplus kilowatt hours with virtually no losses for later use as needed. Get ready to start your personal energy transformation.

It pays off.

Straight from the car to the living room – the battery technology without which electromobility would not have been possible can now also be put to use in your own home. Losses from surplus kilowatt hours produced by photovoltaic installations are now a thing of the past. Mercedes-Benz Energy Storage Home allows you to maximise consumption of your own electricity and to use sustainably generated energy.

Mercedes-Benz Energy Storage systems at a glance.

- Modular system ranging from 2.5–20 kWh
- Can be upgraded to suit your individual requirements
- Safe and long-lasting lithium-ion technology
- Noiseless and reliable
- Wall or upright installation
- Ten-year current-value replacement guarantee
- Mercedes-Benz quality – made in Germany

Up to eight energy modules, each with a capacity of 2.5 kWh, can store the solar power you produce – for use at night and when the sun isn't shining. Although you remain connected to the grid, you gain increased autonomy. Even in the event of a power cut, your continued supply is guaranteed.

The quick and easy way to your own energy storage system.

Your local electrician can help you find the perfect configuration for your Mercedes-Benz Energy Storage Home solution – for example, in combination with a photovoltaic installation. He can identify the ideal storage solution for your needs, and can advise you and act as your contact for planning, ordering and installation.
